PROJECTS

Electric Scooter (Hub)

Tech: Hub Motor, Motor Controller, Battery Pack,
Throttle

- Assembled and tested an electric scooter hub motor system using controller, throttle, and battery pack
 - Integrated wiring and ensured safe power delivery and motor control
 - Learned system integration through hands-on implementation with guidance from online resources(YouTube)
 - Documented build and wiring references using Google Drive
- Google Drive Link : https://drive.google.com/drive/folders/1vJZ4hh2yQedrnNu5ksoPuFHRwKb_VAgZ?usp=sharing

Smart Port Charger

Tech: Electronics Circuits

- Built a smart charging system to automatically cut off power once the battery reaches a set level
- Used basic electronics and control logic to prevent overcharging and improve safety

Smart Glasses for Visually Impaired

Tech: Sensors, Microcontroller, Embedded Control Logic

- Designed and built a wearable smart glasses prototype to assist visually impaired users with obstacle awareness
- Integrated sensors with a controller to detect nearby objects and process distance data in real time
- Implemented feedback mechanisms to improve user safety and independent navigation
- Focused on practical assistive technology through hands-on prototyping and testing

Silent Speech Communication Device For Speech-Impaired Users

- Developed a concept prototype for a silent communication device enabling speech without audible sound
- Explored sensing methods to capture speech intent and convert it into digital signals
- Focused on assistive and hands free communication applications through wearable technology design
- Worked on system-level integration of sensing, processing, and output mechanisms

Water & Beverage Quality Detection Device

Built a portable device to assess water quality and extended it for testing packaged beverages

VISION X , Vnest

Feb , 2026

Project Lead

chennai, Tamilnadu

- Developed cross-platform mobile application interfaces using Flutter (Dart) for Android and iOS
- Integrated hardware components and sensor data with the mobile application through custom logic and APIs
- Managed real-time data storage and synchronization using Google Firebase
- Collaborated with multidisciplinary teams using Git for version control and coordinated feature integration
- Tested and debugged combined hardware–software workflows using Android Studio

LEADERSHIP / EXTRACURRICULAR

- Led and collaborated in hackathon teams, contributing to prize-winning project outcomes
- Communicated technical ideas effectively with teammates, mentors, and judges
- Developed public speaking skills by explaining technical concepts to large and diverse audiences

TECHNICAL SKILLS

Programming Languages: Python, C, Dart (Basic), SQL

Hardware & Embedded Systems: ESP32, Arduino, Sensors, Motor Controllers, Hub Motors, Power Electronics (Basic)

Development Tools: Android Studio, VS Code, Git, GitHub

Technologies / Frameworks: Flutter, Firebase, Embedded Systems, IoT Fundamentals

Operating Systems: Windows, Linux

EDUCATION

Vellore Institute of Technology - Chennai
Bachelor of Electronics and Computer Engineering

July 2025 – May 2029
chennai, Tamilnadu
